- 20. Fair Value Measurements

The Company's financial assets measured at fair value include bonds valued at the lower of cost or fair value when reported at the balance sheet date.

Fair value is defined as the price at which an asset could be exchanged in an orderly transaction between market participants at the balance sheet date. The Company's financial assets have been classified based upon a hierarchy defined by SAP. The hierarchy gives the highest ranking to fair values determined using unadjusted quoted prices in active markets for identical assets and liabilities (Level 1) and the lowest ranking to fair values determined using methodologies and models with unobservable inputs (Level 3). An asset's or a liability's classification is based on the lowest level input that is significant to its measurement. For example, a financial asset or liability carried at fair value would be classified in Level 3 if unobservable inputs were significant to the instrument's fair value, even though the measurement may be derived using inputs that are both observable (Levels 1 and 2) and unobservable (Level 3).

The Company estimates fair values of bonds using prices from third parties or internal pricing methods. Fair value estimates received from third-party pricing services are based on reported trade activity and quoted market prices when available and other market information that a market participant may use to estimate fair value. The internal pricing methods are performed by the Company's investment professionals, and generally involve using discounted cash flow analyses, incorporating current market inputs for similar financial instruments with comparable terms and credit quality, as well as other qualitative factors. In instances where there is little to no market activity for the same or similar instruments, the fair value is estimated using methods, models and assumptions that the Company believes a hypothetical market participant would use to determine a current transaction price. These valuation techniques involve some level of estimation and judgment that becomes significant with increasingly complex instruments or pricing models.

Level 1 Financial Assets

Inputs for instruments classified in Level 1 include unadjusted quoted prices for identical assets in active markets accessible at the measurement date. Active markets provide pricing data for trades occurring at least weekly and include exchanges and dealer markets

Level 2 Financial Assets

Inputs for instruments classified in Level 2 include quoted prices for similar assets in active markets, quoted prices from those willing to trade in markets that are not active, or other inputs that are market observable or can be corroborated by market data for the term of the instrument. Such other inputs include market interest rates, spreads, and yield curves. An instrument is in Level 2 if the Company determines that unobservable inputs are insignificant.

Level 3 Financial Assets

Certain inputs for instruments classified in Level 3 are unobservable (supported by little or no market activity) and significant to their resulting fair value measurement. Unobservable inputs reflect the Company's best estimate of what hypothetical market participants would use to determine a transaction price for the asset at the report date.

Level 3 assets include asset-backed securities and industrial and miscellaneous corporate bonds valued using pricing models that incorporate the specific characteristics of each asset and related assumptions including the investment type and structure, credit quality, industry and maturity date in comparison to current market indices, spreads and liquidity of assets with similar characteristics. For asset-backed securities, inputs and assumptions to pricing may also include collateral attributes and prepayment speeds.

NOTES TO FINANCIAL STATEMENTS

- (1) The Company does not have any financial assets with a fair value hierarchy of level 3 carried at fair value in the financial statements.
- (4) Bonds with NAIC designation 6 or 6* are carried at the lower of amortized cost or fair value. The Company maximizes the use of observable inputs and minimizes the use of unobservable inputs when measuring fair value. Whenever available, the Company obtains quoted prices in active markets for identical assets at the balance sheet date to measure at fair value. Market price data generally is obtained from exchange or dealer markets.

At the close of each quarter, the Company will record its rebate accrual based on year-to-date estimated medical loss ratios calculated as prescribed by the interim final rule issued by the Department of Health & Human Services using year-to-date premium and claim information by state and market segment. Since this accrual reflects the amount of rebate that would be payable based on year-to-date estimated medical loss ratios, the amount of rebate will fluctuate as actual claim experience develops each calendar quarter.

As of March 31, 2015, no amounts were accrued.

- E. Risk-Sharing Provisions of the Affordable Care Act (ACA) - the Company does not write business subject to the Risk Sharing Provisions of the Affordable Care Act.
